crypto_tracker_487.apk

Package: com.cemavci.project

Activity: com.cemavci.project.MainActivity

Minimum SDK: 30

Native Code:

Screens: small, normal, large, xlarge

Target SDK: 32

Version Code: 1

Version Name: 1.0

Run name

Provide a name for your run. By default, we will use the filename as the run name.

crypto_tracker_487.apk

Step 1
Choose application

Step 2
Configure

Step 3
Select devices

Step 4
Specify device state

Step 5
Review and start run

Configure

Setup test framework

Select the test type you would like to use. If you do not have any scripts, select 'Built-in: Fuzz' or 'Built-in: Explorer' and we will fuzz test or explore your app.

Built-in: Fuzz▼

No tests? No problem. We'll fuzz test your app by sending random events to it with no scripts required.

Event count

The number of events between 1 and 10000 that the UI Fuzz test should perform.

6000

Event throttle

The time in ms between 0 and 1000 that the UI fuzz test should wait between events.

50

Randomizer seed

A seed to use for randomizing the UI fuzz test.
Using the same seed value between tests ensures identical event sequences.

Enter a randomizer seed

 Project settings

Automated tests Remote access

Automated runs allow you to execute built-in tests or your own scripts on one or more devices in parallel, which generates a comprehensive report that includes high-level results, logs, screenshots, and performance data.
